A YEAR OF REEMERGENCE

FRIENDS,

2021 proved to be a year of reemergence. Georgia Aquarium focused on rebuilding our team and getting back to full steam ahead on our mission-based activities, returning to field work, and exploring new conservation initiatives.

Additionally in 2021, I took on the role of Association of Zoos and Aquariums (AZA) chair. This positions Georgia Aquarium even more as a leader in the industry, playing an increasingly important part in shaping the future of zoos and aquariums.

Recently, Georgia Aquarium has become a designated Center for Species Survival by the Species Survival Commission of the International Union for the Conservation of Nature (IUCN). We are the first aquarium in North America and one of only two United States facilities to be Centers for Species Survival. This means we will continue to focus on preserving and restoring endangered species in our living collection, while also conducting Red List Assessments, hosting workshops and training other zoos and aquariums in species conservation.

As a part of our efforts to expand our reach beyond our walls, we welcomed Dr. Dayne Buddo in a new position as the Director of External Engagement. Dr. Buddo has begun leading a number of initiatives that seek to deepen our ties with the community at different levels, including strengthening

local community engagement, pushing forward regional programs, and serving as a point person for national and international relationships.

Our commitment to education and the state of Georgia continues, too. Beginning in 2021, as a part of our partnership with Invest Atlanta, Georgia Aquarium has begun to offer scholarships to rising westside Atlanta college students primarily focused on those pursuing degrees in marine biology and other related marine and aquatic fields. The goal is to provide approximately ten \$2K scholarships annually for a duration of ten years.

In a year where many were truly evaluating what was important to them and where they wanted to focus their support, I thank you all sincerely for your belief in and continued support of Georgia Aquarium. It wouldn't be possible without you.

Georgia Aquarium is a nonprofit committed to inspiring awareness and preservation of our ocean and aquatic animals worldwide.

Sincerely,
Brian Davis, PhD

President & CEO

“Keeping them healthy and comfortable in their geriatric years is very important to us.”

Jenn Odell, Senior Curator, Zoological Operations/
Animal Training—Mammals and Birds, Georgia Aquarium

SAFEGUARDING *our* SENIORS

Georgia Aquarium is home to a group of geriatric Asian small-clawed otters.

At this point in their lives, they are most often seen sleeping or grooming one another. Changes in their activity level and mobility necessitated their shift from the main habitat to a behind-the-scenes habitat that is easier for them to navigate.

Their care is specialized for their geriatric needs. This includes close monitoring by trainers, individualized diets, and routine exams by veterinary staff.

In addition, on exhibit, are the two new arrivals to Georgia Aquarium! Triton (female) and Han (male) both came to Atlanta through the AZA’s Species Survival Plan breeding and transfer process. Triton was born in May of 2017, Han October of 2018.

“We are so excited to welcome two new Asian small-clawed otters to the Aquarium, while still being able to provide for and learn from our older otters,” says Jenn Odell, Senior Curator, Zoological Operations/Animal Training—Mammals and Birds.

ENTERTAINING *while* EDUCATING

Georgia Aquarium became the first Cognia STEM certified aquarium in the entire world in 2020.

In 2021, we renovated our gallery **Aquanaut Adventure: A Discovery Zone** reflecting this commitment to education and inspiration. The exhibit updates provide a fully immersive experience, traveling in the footsteps of scientists and explorers through some of the most extreme environments on Earth.

The gallery is separated into six zones, from dry deserts to deep oceans, and is home to some new animal exhibits including wood frogs, bioluminescent animals, and insects.

By using immersive design, theming and storytelling, the Georgia Aquarium team was able to create a fully engaging experience of exploration and discovery alongside STEAM professionals in the most extreme environments our planet has to offer.

a NATURAL PARTNERSHIP

Georgia Aquarium partnered with Georgia Natural Gas (GNG) to add enhancements to our southern sea otter exhibit.

This interactive element includes two games that teach visitors the important role southern sea otters play in reducing carbon emissions. While playing, guests also learn how they can help protect the environment by making their natural gas usage carbon neutral with the Greener Life program from GNG.

Sea otters are considered a keystone species because of their role in keeping kelp forest ecosystems in balance. Kelp is important to the ecosystem as it can naturally absorb and hold a substantial amount of carbon from the atmosphere. A large population of sea urchins can devastate a kelp forest by eating the kelp's "holdfasts," or the root-like structures that anchor them to the seafloor. By hunting sea urchins, sea otters keep the population in check and in turn, the kelp forests can thrive.

"We are always looking for innovative ways to reduce our environmental impact and to share that message with our guests."

Michael Lewis, Vice President of Exhibits and Projects, Georgia Aquarium

The Greener Life program from GNG uses Environmental Protection Agency standards to calculate the amount of greenhouse gases released into the atmosphere from customers' use of natural gas. GNG then purchases and retires carbon offsets to balance the impact of those customers' emissions. This product helps GNG consumers do their part for the environment and reduce their carbon footprint.

[Enhydra lutris nereis]

GUEST PROGRAMS & EVENTS participation

2021 brought many events back to Georgia Aquarium.

Hosted
185
events
and
11
external
Aquarium buyouts

Almost
4,000
guests celebrated at the Aquarium through our *birthday parties*

3,000

guests spent the night through our *Sleep Under the Seas program* including general guests, Boy Scouts, Girl Scouts and Cub Scouts

Aqua Vino

After missing 2020, Georgia Aquarium's largest fundraising event, Aqua Vino, was held on October 1, 2021. Guests enjoyed wine tastings, small bites, live music, and exciting auction items while exploring our galleries. All proceeds supported our vital Research and Conservation initiatives.

Other events throughout the year supporting Georgia Aquarium programs included

5K Race

Fish & Chips Golf Tournament

Science on Tap

Close to
39,000
guests participated in our *Behind the Seas Tours* gaining a deeper understanding of the Aquarium and our mission

Pathways TO Promise

**OPENING UP
NEW AVENUES
FOR OUR GREATER
COMMUNITY**

Georgia Aquarium is continuously striving to be a bigger part of the greater Atlanta community as a whole, and takes pride in our conservation and community enrichment efforts across the city.

MILITARY SALUTE

Georgia Aquarium and our Military Salute program's founding partner, The Home Depot Foundation, are proud supporters of our armed forces. Through our Military Salute programming, we are dedicated to impacting military personnel with positive experiences.

In 2021, Georgia Aquarium was able to bring on Adam Rosbury to manage our Military Salute program. We were able to grow our external outreach to Veterans Service Organizations, Veterans Affairs groups, and other military groups that had no prior knowledge of what Georgia Aquarium offers the military and their families.

VETERANS IMMERSION PROGRAM (VIP)

NOW SERVING **34 DIFFERENT VETERANS GROUPS** (MORE THAN DOUBLE THE NUMBER OF GROUPS SERVED IN PREVIOUS YEARS!)

SUCCESSFULLY ORGANIZED AND FUNDED **TRAVEL FOR VETERANS GROUPS** THAT WOULD NOT HAVE THE ABILITY TO ATTEND OUR VIP EVENTS OTHERWISE

EXPANDED OUR REACH TO VETERANS IN **15 DIFFERENT STATES**

OVER 1,000 VETERANS PARTICIPATED IN IMMERSION PROGRAMS IN 2021

IMPLEMENTED THE **NEW SHARK CAGE DIVE** INTO THE VETERANS IMMERSION PROGRAM (VIP)

GOLD STAR FAMILY DAYS

We brought back Gold Star Family Days to Georgia Aquarium to serve families that have lost a loved one in service to this country. We hosted presentations honoring the fallen heroes as well as provided experiences for all families in the Aquarium including admission, interactive programs, meals, parking, and photos and videos.

VETERANS CARE PACKAGES

We had over 300 volunteers join us for a large-scale, multiday volunteer event to assemble 10,000 care packages for local veterans and first responders. This supported 22 local first responder and VA groups.

BATTLE BUDDIES DAY

Service animals in training for disabled veterans visited Georgia Aquarium to roam with their trainers to help the animals learn to cope with large crowds and distractions.

VETERANS FIELD IMMERSION PROGRAM

This newly created program under the Military Salute umbrella uses an integration of the therapeutic nature of diving and service projects to provide veterans with a meaningful and fulfilling experience in the field. Two dive trips were planned and executed to Jupiter, Florida at no cost to the participating veterans.

COMMUNITY OUTREACH

As a leader in aquatic research and exceptional animal care, Georgia Aquarium is dedicated to fostering a deeper appreciation for our ocean and its animal inhabitants. We give back to our city by partnering with like-minded organizations and providing resources that encourage, inspire, and support our local community here in Atlanta.

ARTFULLY SUPPORTING A GREAT CAUSE

Georgia Aquarium received a one-of-a-kind violin from artist, Antonio "Tonny" Barajas, to support Shepherd Center patients' rehabilitation programs. The Georgia Aquarium Violin, decorated with incredible detail of many animals you can find at the Aquarium, came as a tribute to the Aquarium, a place the artist admires and respects, and as a thank you to the Shepherd Center. In 2018, Tonny's grandfather suffered an accident and was rehabilitated at Shepherd Center. Georgia Aquarium and Shepherd Center held a raffle in September 2021, at the culmination of Spinal Cord Injury Awareness Month, raising over \$3,000 for patients at Shepherd Center to participate in our Journey with Gentle Giants program.

INVESTING IN FUTURE GENERATIONS

Georgia Aquarium partnered with Invest Atlanta to support our newest gallery, SHARKS! Predators of the Deep. This partnership includes Georgia Aquarium's commitment to providing community benefits to Atlanta's Westside district.

Ten students from Booker T. Washington High School in Atlanta were selected to receive the inaugural Georgia Aquarium College Scholarship. A reception was held in May 2021, honoring these special students, as well as Invest Atlanta, in our dynamic shark gallery. That evening, Dr. Brian Davis, President & Chief Executive Officer at Georgia Aquarium, surprised the students by doubling their scholarship amount, further supporting these students' goals for the future, and inspiring the next generation of aquatic advocates.

ENCOURAGING WOMEN IN SCIENCE

Made possible through support from The UPS Foundation, Georgia Aquarium was able to host apprentices from Spelman College. This program was created to offer minority, female students a unique opportunity to enhance their careers in STEM.

Each apprentice logged 12 to 40 hours each week assisting in animal care on our Fish and Invertebrates team with an emphasis on coral husbandry. The apprentices helped culture and propagate numerous coral species and packed and sent dozens of Georgia Aquarium cultured corals to other AZA partner facilities. Apprentices also assisted in the construction of a new 250-gallon coral holding system to help support the AZA Florida Reef Tract Coral Rescue Program.

Two of the apprentices completed their confined water Scuba certification and will be working on Open Water soon. We hope to continue to celebrate and inspire future female scientists while encouraging equity, diversity, and inclusion.

RIPPLE EFFECT

EXPANDING GEORGIA AQUARIUM'S GLOBAL REACH

2021 saw the return to the field for the Georgia Aquarium Research & Conservation team, with projects and activities taking place around the Southeast and as far away as the Galapagos.

GEORGIA AQUARIUM FIELD WORK IN THE GALAPAGOS

In fall of 2021, members of Georgia Aquarium’s Research and Conservation, Animal Health, Dive, and Marketing and Communications teams undertook an expedition to the Galapagos Archipelago.

Joined by colleagues from the Galapagos Whale Shark Project and the Galapagos National Park Directorate, the goal of the expedition was to carry out field work for the long-term study of whale sharks in the far northern region of the Galapagos.

During a week of work, the group used various field methods to gather data that will continue to shed light on some of the remaining mysteries of whale sharks: where are they going? Where are they eating? Are they interacting with other animals?

While in the Galapagos, the main research activities included identifying whale sharks with photo-ID and spot pattern recognition, as well as attaching satellite tags, animal-borne video cameras and sampling the whale sharks’ microbiome. The satellite tags not only track the whale sharks’ travels but also give insight about their diving behavior and habitat preference using 3D movement data. The animal-borne video cameras give a full visual understanding of the sharks’ movements underwater and any possible interactions with other animals. All microbiome samples taken help facilitate innovative research that looks at the role these play in determining elasmobranch health and how the whale sharks’ unique microbiome might be involved in disease, host immunity, nutrition, and waste processing.

During this expedition, the Georgia Aquarium team also carried out field work alongside local fisherman to collect data on other sharks in the area. The goal was to obtain blood and tissue samples from tiger, silky and Galapagos sharks and to explore the relationship between plastic ingestion (microplastics) and diet. Tiger sharks are generalist feeders and many of the species they eat, including sea birds and sea turtles, are also heavily impacted by ocean plastics. Researchers can study microplastics in the bloodstream non-invasively by collecting a blood sample. Diet can also be estimated similarly in blood-based chemistry and with the premise “you are what you eat”. These samples will provide insight for other projects focusing on microplastics.

Georgia Aquarium is proud to continue to take part in field research of our flagship species to help better understand and protect these gentle giants.

WHALE SHARK

SCIENTIFIC NAME
Rhincodon typus

ANIMAL FACT Each whale shark has its own individual spot pattern; like human fingerprints, no two are exactly alike.

CONSERVATION STATUS
Endangered

A PLACE TO WARM UP

At the end of 2021, Georgia Aquarium received some new temporary residents; eight cold stunned loggerhead sea turtles that were rescued off the coast of New England.

Colder weather can cause sea turtles to become susceptible to hypothermia which makes it difficult for them to find food and swim to the best of their abilities.

Each year, zoos and aquariums from across the country work alongside our partners at U.S. National Oceanic and Atmospheric Administration (NOAA) and U.S. Fish and Wildlife Service (USFWS) to help provide cold stunned turtles with temporary homes to warm up and gain strength.

These turtles will continue to receive incredible care from our Animal Care and Veterinary teams behind the scenes and once they are deemed strong enough, be released back to the ocean.

LOGGERHEAD SEA TURTLE

SCIENTIFIC NAME
Caretta caretta

ANIMAL FACT Loggerhead sea turtles migrate huge distances between their feeding grounds and their breeding/nesting sites.

CONSERVATION STATUS
Vulnerable

SHARK RESEARCH & ESTUARY HEALTH

Georgia Aquarium's research team conducted field research in three sound systems along the Georgia coast evaluating estuary health.

The team, in collaboration with University of Georgia at Skidaway Island and Kennesaw State University, conducted a fishing survey where they collected samples from 200 juvenile sharks from Dobby Sound (i.e. Sapelo Island), Ossabaw Sound, and Wassaw Sound (i.e. Savannah), which have varying degrees of human impact. The aim is to use sharks as "canaries in the coal mine" to learn about the health of these important coastal ecosystems.

A small blood sample was taken from juvenile sharks to quantify total mercury levels as well as measuring bacteria and heavy metals in the water and sediment at each sampling site. All work was performed as part of Allyson Stiles' Master's thesis project through Kennesaw State University, under the observation and guidance of Dr. Kady Lyons, Research Scientist at Georgia Aquarium. Allyson Stiles is currently writing her Master's thesis summarizing findings from this field work and aims to defend in Summer 2022. Georgia Aquarium and our research partners will continue to monitor and further investigate the role juvenile sharks play in determining the health of Georgia's estuaries.

BONNETHEAD SHARK

SCIENTIFIC NAME
Sphyrna tiburo

ANIMAL FACT Bonnethead sharks are the smallest of the hammerhead shark genus, *Sphyrna*.

AMERICAN ALLIGATOR

SCIENTIFIC NAME

Alligator mississippiensis

ANIMAL FACT The American alligator has sensory pits that can detect changes in water to find prey.

CONSERVATION STATUS

Least Concern

Georgia Aquarium is a nonprofit committed to inspiring awareness and preservation of our ocean and aquatic animals worldwide.

IN ORDER TO CONTINUE THESE EFFORTS, WE NEED YOUR HELP

HELP CREATE A SEA CHANGE

PLEASE SUPPORT GEORGIA AQUARIUM

Together, we can create a sea change—in our ocean, and for the wondrous life that inhabits it.

You can support the work being done in our facility and in the field through a tax-deductible contribution to Georgia Aquarium. Your contributions are vital to the success of our mission. We couldn't do this without you!

For more information on how you can help, please contact our Development department at 404.581.4136 or Development@GeorgiaAquarium.org or visit GeorgiaAquarium.org/Support-Georgia-Aquarium.

MANTA RAY

SCIENTIFIC NAME
Mobula sp. cf. birostris

ANIMAL FACT Manta rays are primarily plankton feeders, but can also consume small fishes.

CONSERVATION STATUS

Vulnerable
